Transportation services from Dammam Seaport to the Jubail Desalination Plant for the SWCC project, using Conventional Hydraulic trailers for transformers each measuring 9.00 x 3.90 x 4.70 meters weighing 160 tons.

The transportation route required meticulous planning and coordination to ensure smooth movement, including obtaining necessary permits, managing traffic, and addressing road clearances. Special attention was given to overcoming potential obstacles such as narrow roads, low overheads, and other potential hazards.

Transportation of 7 x 100-120MVA Transformers with accessories from Jeddah Islamic Port to Amaala Sites, Neom with Installation of Main transformer body onto foundation.

The services involved Customs clearance, Cargo inspection at port, with timely arrangements of conventional hydraulic trailers, low bed & flatbed trailers. Temporary storage was arranged near port to pull out the units.

BAFCO is also equipped with the Hydra-Slide HT500 Skidding System The installation was executed with precision and expertise by BAFCO's skilled engineering team.

Transportation services from King Fahad Industrial Port in Jubail to the Zuluf Water Treatment Plant., using Conventional Hydraulic trailers, each cargo measuring 32.64 x 5.20 meters and weighing 77 tons .

The transportation route included several challenges, such as crossing five main highways, gate openings and the removal of fences. Furthermore, a Low Tension (LT) transmission line under Saudi Aramco's jurisdiction had to be temporarily shut down to ensure the cargo's safe passage.

Fin Fan Cooler Jubail Industrial area to Amiral Project

Transportation services from Baker Hughes facility Dammam Second Industrial Area and transported to the Jafurah Gas Compression using conventional Hydraulic trailers for five units of Two Stage Centrifugal Compressor Skids, each measuring 20.00 x 6.00 x 6.54 meters and weighing a total of 186 tons.

The project involved addressing various challenges along the route, including road clearance, traffic management, and the precise timing of delivery to ensure no disruption to ongoing operations.

Through careful planning and execution, the compressor skids were delivered on time, contributing to the timely progress of the Jafurah Gas Compression Plant project and ensuring the plant's operational efficiency.

Flare Stack 35Mtr long Dammam 2nd Ind area to Jafurah Project site

The transportation services for 113 cargo units from Jubail/ Dammam Fabrication facilities to Jafurah Gas Compression Plant

Conventional hydraulic trailers in 4 file combination for DEPRESSURISING VESSEL (41.62 x8.02 x8.12) Wt.300.32 & LP SEPARATOR (42.02x8.12x8.74) Wt.279.39. Bolster combinations for Delivering WATER OIL SEPARATOR (WOSEP Package) (55.85 x5.52 x5.89) Wt.203.6

The transportation route faced significant challenges, highway crossings, 20 km of counter-flow traffic, and removal of multiple furniture & fixtures with temporarily shut down of transmission lines along Old Abqaiq Road.

These complexities required careful logistical planning and precise execution.
